**“SAVING THE OCEAN AND
ITS ECOSYSTEM STARTS
WITH YOU”**

WWW.BLUEGOLD.AFRICA

The health of the ocean is in danger

PROBLEM 01

PLASTIC WASTE

WWW.BLUEGOLD.AFRICA

SOLUTION

Reduce your plastic usage

...

PROBLEM 02

OVER FISHING

SOLUTION

Catch fish wisely — only take what we need, let small fish grow, protect breeding areas, and give the ocean (or lake) time to rest so fish can come back.

We must protect our coasts so that the fish in our waters belong to us. When foreign boats come and take too many fish, our people have less food and fewer jobs. By guarding our waters and working together, we make sure Africa's fish stay for African families — today and in the future."

PROBLEM 03

CLIMATE CHANGE

SOLUTION

Solutions to solve climate change

- 1. Protect sea life – Take care of coral reefs, mangroves, and seagrass because they help clean the air and keep the ocean healthy.*
- 2. Keep the ocean clean – Don't throw trash or plastic in the water; it hurts animals and makes the ocean sick.*
- 3. Use clean energy – Wind and waves can make power without smoke, helping the ocean stay cool and full of life.*
